

Cancellation & Refund Policy

Purpose

This document provides a project-level cancellation policy for the knowledge base. The supplied project requirements explicitly define the customer Cancel path, but they do not specify refund percentages, refund timing, or cancellation deadlines.

Cancellation Rule

Before final confirmation, the customer can select Cancel. The booking status is then set to Cancelled and the booking process ends.

Refund Information

Refund amounts, refund eligibility, payment gateway behavior and cancellation deadlines are not specified in the supplied requirements. These values should be configured separately if the application requires them.

AI Response Guidance

If a customer asks about a specific refund amount or deadline that is not present in the knowledge base, the assistant should state that the policy information is not available rather than inventing a value.
