

Seat Booking Rules

Availability Check

The system checks the available seats against the requested number of tickets.

Example

If total seats are 100 and 95 are already booked, 5 seats are available. A request for 2 tickets can continue. If only 1 seat is available and 2 tickets are requested, the booking cannot continue.

Seat Allocation

- Verify availability again before processing the booking.
- Allocate seats.
- Update available seats.
- Generate booking/ticket information.
- Change booking status to Confirmed.

Update Example

If 20 seats are available and the customer requests 3 tickets, the available seat count becomes 17 after successful booking.
